on that group, taken in conjunction with the special articles upon the various families and genera scattered through the work, furnishes the best guide at present extant to the classification of those interesting though lowly organisms. Upon Bacterium and the Schizomycetes we find a considerable quantity of new information brought in, as also upon the parasitic insects and Acarina and the Infusoria, derived from the recent publications of Ménézin and Andrew Murray upon the former groups, and from the valuable manual of the Infusoria of Mr. Saville Kent. We are sorry to note, however, that while fully availing himself of the last-mentioned important work, the editor has entirely passed over the most magnificent work that has appeared of recent years upon any group of Protozoa, namely Prof. Leidy's 'Monograph of the Freshwater Rhizopoda of North America.' This is the more to be regretted as, since its publication, a manual founded upon it has been published in America, and there can be no doubt that many of the genera proposed by Prof. Leidy will be frequently referred to in the literature of the microscope.

We had noted several other points in which it seems to us that there is room for improvement; but fault-finding is an unsatisfactory business, and all the deficiencies that we could indicate would but very slightly derogate from the general excellence of the book. Its chief value consists in the immense mass of varied information upon all subjects of interest to microscopists, collected in its pages in a most convenient form for reference; and from the mode of treatment adopted it is, as we have before pointed out, well fitted to serve as a guide in the investigation of many departments of natural history quite outside the domain of microscopic work. On this ground we can recommend it to all students of natural history, and especially to those located in country places at a distance from libraries. To such workers it will prove invaluable as a general book of reference.

The plates with which the volume is illustrated are for the most part the same as in the last edition; but five new ones have been added, bringing the whole number up to fifty-three, a large proportion of them coloured. The immense number of figures contained in these plates, with the numerous woodcuts scattered through the text, render this one of the best-illustrated volumes with which we are acquainted.

A Catalogue of the Collection of Birds formed by the late Hugh Edwin Strickland, M.A., F.R.S., &c. By OSBERT SALVIN, M.A., F.R.S., Strickland Curator in the University of Cambridge. Cambridge University Press, 1882.

THE title of the present volume fully explains its contents, and renders much further explanation unnecessary. It is a descriptive catalogue of the extensive collection of birds formed by the late Mr. Strickland and bequeathed by his widow to the Cambridge

University. Attached to the 'Catalogue' is a supplement or list showing the sources whence the specimens (about 6000 in number) were obtained. Such a work will greatly enhance the value of this collection, to which it forms an almost exhaustive guide; and as such it will doubtless be warmly welcomed by most working ornithologists. Appended to each species is the reference to its original description and to works containing its geographical distribution; but we think that the value and interest of the 'Catalogue' would have been considerably increased if the latter item had been briefly sketched out in a similar manner to that in the British-Museum Catalogues of Birds. The general arrangement adopted, subject to certain necessary modifications and additions, is that elaborated by Messrs. Sclater and Salvin in their 'Nomenclator Avium Neotropicalium,' which has for its basis the system of Huxley.

In the earlier portions of the work (the only ones at present we have had the opportunity of carefully examining) we notice that Mr. Salvin does not admit the distinctness of *Turdus magellanicus* from *Turdus fallandicus*. The latter bird is, we believe, an island form confined to the Falklands, whilst the former is found in various parts of South America. Again, we fail to see why the genus *Merula* should be disregarded when the genera *Oreocincla*, *Geocichla*, *Petrocincla*, and *Zoothera* are recognized. The name *Oreocincla Heinii* of Cabanis surely has the precedence over that of *O. iodura* of Gould, although the former naturalist erroneously gave "Japan" as the locality for his species. We also notice that Mr. Salvin (following Messrs. Blanford and Dresser in their celebrated 'Monograph of the Chats') makes the *Saxicola leucomela* of Pallas synonymous with the *Saxicola lugens* of Lichtenstein, although these two birds are quite distinct. Again, upon what grounds is Cetti's Warbler included in the subfamily Rutilinæ? Mr. Salvin also makes this bird synonymous with the *Bradypterus platyrus* (? *platyrus*) of Swainson. The type of this species (from S. Africa) is in the Cambridge Museum, and was identified as "nothing but Cetti's Warbler" by Mr. Dresser in his 'Birds of Europe,' a conclusion shown to be totally erroneous by Mr. Seebohm in 'The Ibis' for 1878, p. 380. Swainson's generic name will stand for this South-African species; but his specific name must give place (if the law of priority is enforced) to that bestowed by Vieillot; and it will consequently stand as *Bradypterus brachypterus* (Vieill.). Moreover Cetti's Warbler has no claim whatever to be included in the genus *Bradypterus*, nor has it the slightest claim to such a generic title. The type of this genus (*B. brachypterus*) has twelve tail-feathers, whereas the group of Warblers amongst which Cetti's Warbler is included (*Cettia*) is distinguished by having only ten tail-feathers.

We must also strongly protest against the changing of many well-known names—names familiar to us from our childhood—of such birds as the Garden-Warbler, the Whitethroat, the Dartford Warbler, the Reed-Warblers, and the Chiffchaff, and substituting for them unknown synonyms raked up from a just and well-merited oblivion, or transferring the name of one species to another until it ceases to have any definite meaning.

But apart from these faults and inaccuracies it is impossible to overestimate the value of such a Catalogue, dry enough, it is true, to a non-scientific reader, but to the ornithologist working with the birds in this magnificent collection truly a "friend in need."

PREFACE.

THE collection of Bird skins, here catalogued, was formed by the late HUGH EDWIN STRICKLAND, M.A., F.R.S., of Oriel College, Oxford, and Deputy Reader of Geology in that University, who at the age of forty-two years was killed by a railway train whilst in the pursuit of his scientific labours on the 14th of September, 1853. Begun by him when yet a boy, for the label of one of the specimens (No. 3051 *a*) bears date August, 1822, the formation of this collection continued to be a great object of interest with him throughout his life; but most of the specimens obtained by him prior to 1833 were mounted and placed in cases in the hall at Apperley Court, near Tewkesbury, his father's seat, where they still are.

In the year last mentioned, however, his brother Algernon Strickland, a midshipman in the Royal Navy, visiting the Cape of Good Hope, Mauritius, and Southern India, obtained about 90 specimens now in the collection; and in the winter of 1835—36, STRICKLAND himself made a voyage to Greece and Asia Minor, where he collected upwards of 100 others.

In 1838 STRICKLAND largely increased his collection by purchasing about 1200 specimens from his cousin Nathaniel Constantine Strickland. Another cousin, Arthur Strickland, purchased at the same time some 500 additional specimens, which also became the property of H. E. STRICKLAND in 1850. The specimens thus acquired form no inconsiderable part of the whole collection. They had been originally obtained, as I am informed, partly from captains of merchantmen, and partly from dealers.

The most important part of the present collection, however, was got together between 1838 and 1853; and the names of most of the best known ornithologists and collectors of that period appear on the labels as contributors to it, among whom Andersson, Baird, Blyth, Boys, Brandt, Gosse, Hodgson, Jerdon, Petherick, may be specially mentioned.

The whole number of skins is 6006. About one-third of which, including those obtained by STRICKLAND himself, and by his brother Algernon, may be assigned to the collectors themselves. The rest, including the specimens bought from Nathaniel Constantine Strickland in 1838 and 1850, were generally obtained from dealers in England and Scotland.

Though the classification of Birds was a subject that, as his writings shew, constantly occupied STRICKLAND'S attention, it is clear that up to the time of his sudden death his opinions on few if any points were matured. It is true that amongst his papers he left in MS. a comparatively complete catalogue of birds, extracted from the literature of ornithology, in which the various synonyms, and range of each species, as far as was then known, are elaborately set down. Each species is treated of on a separate slip of paper, and these slips are arranged in a certain order; but it is obvious on examination that the arrangement was dictated merely by convenience and cannot be taken to indicate any definite opinions.

This arrangement might have been used as STRICKLAND'S system of classification, but a moment's reflection shews the impropriety of publishing such a system as the one finally adopted by its author; for by doing so it is evident that STRICKLAND would be supposed to have held views on many questions concerning which he never publicly expressed himself. I therefore had to seek another classification, and I naturally inclined to follow that used in the *Nomenclator Avium Neotropicalium*, published in 1873 by Mr Sclater and myself, which has as its basis the system of Huxley. Into this classification, which treats of South American birds only, I have

inserted the species of the rest of the world, as represented in the collection, wherever I thought they could be most conveniently placed.

The references given in the catalogue under each species are; (1) to the original description, (2) to some work where the species is treated of either as regards its geographical distribution or its classification. In almost every case where STRICKLAND has mentioned a species, even incidentally, in his writings, I have given the reference; and also the synonyms, if any, under which the species was named in the collection. Where, however, a species appears to me to have been wrongly determined, I have not thought it expedient to quote the wrong name unless the statement had been published.

As this Catalogue has been a longer time in passing through the press than I at first anticipated (it contains about 12000 references), several recent important works could not be quoted in the earlier portion.

In preparing the Catalogue, and in re-arranging the collection in conformity therewith, I must gratefully acknowledge the patient help which I have constantly received from Mrs H. E. STRICKLAND, without whose minute and accurate knowledge of almost every individual specimen, my attempts to trace their history would have resulted only in failure. To Mrs STRICKLAND I am also indebted for the following list, shewing the sources whence the collection was derived. To this I have added the approximate number of specimens to be referred to each.

It remains to be said that the collection was presented to the University of Cambridge by Mrs STRICKLAND in 1867 under conditions which will be found in the *Ordinationes Academicæ Cantabrigiænsis* (ed. 1877, p. 208); and that the chief events of STRICKLAND'S life are told in his *Memoirs* by his father-in-law, the late Sir William Jardine, published in 1858, to which is added a selection from his principal scientific papers.

The separation of this bird from the more slender-billed forms of *Malacocercus* such as *M. earlii* seems hardly justifiable. But should it prove distinct the right place for it seems to be in the genus *Argya*, Less. (*Traité d'Orn.* p. 402, (1831), an older name than *Malacocercus*, Swains., and one the larger genus should bear, were all these closely allied forms united together.

Lord Tweeddale, who has kindly examined for me this and other specimens of this obscure family, says "that it is identical with his type specimen of *A. magnirostris*, but that it may be *A. phayrei*, Blyth." This name Blyth seems latterly to have considered a synonym of *A. nipalensis*, supposing his title to have been founded upon what was probably the young of that species. *A. nipalensis*, however, is a much smaller bird, and differs in the coloration of the head.

In 1843 Strickland, in his notes to Col. Drummond-Hay's Catalogue of Birds found in Corfu &c. (Ann. & Mag. N. H. xii. pp. 416, 424) refers to the supposed identity of *S. stapazina* and *S. albicollis* (*aurita*), and remarks that the former having been found breeding in Corfu, the distinctness of the latter would be proved on its being found to breed in Crete. In a notice of Malherbe's 'Faune Ornithologique de la Sicile' (Ann. & Mag. N. H. xiv. p. 432) attention is drawn to his assertion of their distinctness. Though Strickland as late as 1849 (Contr. Orn. p. 60) still seemed undecided on the

point, the question cannot now be considered an open one, as the fact of the distinctness of the two species is quite settled.

These specimens, sent by Jerdon as doubtfully referable to *D. jerdoni*, Blyth, were considered by Strickland certainly to belong to that species. They agree fairly with Blyth's description, being similar to *D. sylvatica*, but decidedly smaller. Jerdon (*B. Ind.* ii. p. 180) refers this bird with doubt to what he calls *D. longicaudata*, Tick. But this name cannot be thus used, for Tickell in employing it was bestowing no new title but merely misapplying Gmelin's name for *Orthotomus longicauda*.

The position of this genus is by no means established. Blyth (Cat. Calc. Mus. p. 194), without assigning it to any Family, places it between the *Ampelidæ* and *Eurylæmidæ*, at the same time suggesting its alliance with *Pteruthrius*. Jerdon places it in the *Liotrichinæ*. By other writers it has been classed with the *Ampelidæ* (Gray), *Campophagidæ* (Bp. & Wallace), *Dicruridæ* (Bp.), and *Sturnidæ* (Sundevall). In placing the genus here I follow Jerdon. Strickland's specimen is but a fragment.

Alauda petrosa, Mont. Trans. L. S. iv. p. 41.

a Aberdovey (*H. E. Strickland*) Aug. 1833. — *b* (*N. C. Strickland*) 1838.

Gmelin's name *Alauda obscura* (Syst. Nat. i. p. 801), based upon a description of Cetti's (Stor. Nat. di Ucc. Sard. p. 150), has been placed by Gray with doubt as a synonym of *Anthus campestris*. Should it be applicable (as seems not impossible) to any other *Anthus* than the present, Montagu's name will have to be used for the Rock-Pipit. Plate 138 of Gould's Birds of Europe, as pointed out by Strickland (Ann. & Mag. N. H. viii. p. 372), represents this species, but the propriety of adding *Anthus rupestris*, Nilss. to its synonyms may be questioned (*cf.* Newton *l. s. c.*).

I believe all these specimens are referable to the species called *A. striolatus* by Blyth, being unable to detect any tangible difference between the specimens sent by Jerdon as *A. striolatus* and *A. malayanus*.

407. *Anthus rufulus*.

Anthus rufulus, Vieill. N. Dict. d'Hist. N. xxvi. p. 494: Gal. des Ois. i. t. 161.

a Nepal (*B. H. Hodgson* 432) 1845. — *b* India ("*Anthus agilis*" *E. Blyth*) 1846.

I follow Jerdon in placing these specimens under this name. Whether those I place under *A. striolatus* are really different is quite doubtful. Mr Brooks (*Ibis*, 1874 p. 460) maintains positively that there are two species distinguishable by their song, but the characters he gives (a usually longer hind claw and larger bill) by which alone skins can be differentiated do not help one much. Lord Tweeddale (*Ibis*, 1874, p. 141) doubts the propriety of separating *A. striolatus* from *A. rufulus*.

¹ The absence of the first primary in *C. cruralis* and the length of the second point to the *Motacillidæ* as the position of this genus. *C. rufescens*, however, has a small first primary, the second being long, as in *C. cruralis*. The formation of the wing is quite different from that of *Megalurus*, *Malacocercus*, &c., with which genera Strickland associated *Cinclorhamphus* (Contr. Orn. 1848, p. 26). Notwithstanding the presence in some species of a small first primary I consider this genus should be placed in the *Motacillidæ*.

A reference to the 'Isis' (without date or page) is usually given as the work in which this reputed genus of Boie's was founded. I can find no earlier mention of it than 1829 (l. s. c.), and it becomes a question whether *Chloropsis*, (Jardine and Selby,) is not an older title.

Of specimens *f* and *g* Blyth writes "*Iora*. Although I never saw the *zeylonica* plumage here at any season, yet indications in this state are sometimes seen of it." Strickland (*Ann. & Mag. N. H.* xiii. p. 205) he states that Dr Horsfield informed him that black-headed specimens of this bird never occurred in Java. In 1842 (*Ann. & Mag. N. These specimens have a well-developed crest, but it is not so large in either as in some examples of *D. grandis* I have seen, nor is the bill so long. They probably belong to the bird described as *D. orissæ*, (A. Hay, Madr. Journ. x. p. 121) should that race meet with ultimate recognition as distinct from *D. grandis*.

a Malabar (*N. C. Strickland*) 1838.

This specimen agrees closely with one of Dr Horsfield's examples in the University Museum. It bears a ticket inscribed "*Lanius malabaricus*, Lath. Malabar Shrike. Irides red." The crest is less developed than in Jerdon's specimen of *D. malabaricus*. The locality "Malabar" marked upon the ticket is probably conjecture.

¹ The materials available in the Strickland Collection are not sufficient for me to add anything towards the elucidation of the question whether there be one or more species of this form. At least a dozen names have been proposed for various races, all of which Mr Sharpe places as synonymous with *D. paradiseus* (L.).

a Malacca (*Capt. Nash*) 1837. — *b* Malacca (*Bt. at Birmingham*) 1843. — *c* India ("*Edolius rangoonensis*, Gould" *E. Blyth*) 1846.

None of these specimens are in good condition, but so far as I can see belong to the species or race to which the above name seems applicable.

580. Graucalus sp. ?

a (*Arthur Strickland*) 1840.

Strickland identified this specimen with *Lanius robustus*, (Lath. Ind. Orn. Suppl. p. xviii.) and it agrees fairly with Latham's description, except as regards dimensions, (the specimen being eleven instead of twenty-one inches long), and as regards the black band on the tail said to exist in *L. robustus*, but which this skin does not possess. Gould (Ann. & Mag. N. H. xi. p. 235) considers *L. robustus*, Lath. to be one of the numerous forms of *Graucalus mentalis*, and he may be right. The present bird seems to me to be more nearly allied to *G. atriceps*, Müll. & Schl., from which, however, it differs in having the tips of the lateral rectrices white.

Strickland (*Ann. & Mag. N. H.* xv. p. 275) pointed out that *Phœnicornis flammeus* of Jerdon's ‘Illustrations’ (pl. ii.) is certainly the same as *Muscicapa flammea* of Temminck, and hence its range extends to Java and Sumatra. He further states that it is not the “Oranor” of Levaillant (*Ois. Afr.* pl. 155) as supposed by Jerdon, that bird being identical with *Pericrocotus peregrinus*.

The bird, called with doubt "*Phœnicura miniata*, Temm." by Sundevall in his paper on the Birds of Calcutta, is stated by Strickland to be referable to this species (Ann. & Mag. N. H. xviii. p. 251).

Abyssinian examples, (*L. fallax* Finsch. & Hartl.), however, are intermediate, and it would seem as if one form passed gradually into the other.

latter name. He several times insisted upon the rejection of the name *cristatus* on account of its inapplicability to this species.

Strickland (Ann. & Mag. N. H. xiii. p. 35) corrected Blyth's statement (J. A. S. B. xi. p. 791) that the Indian species of this form is the *M. leucura* Latham but not of Gmelin, the fact being that Gmelin gave a Latin name to Latham's bird, which the latter states came from the Cape of Good Hope. Strickland further suggested that as the description agrees fairly well with the Indian bird, the South African locality assigned to it was probably erroneous.

Strickland (Ann. & Mag. viii. p. 373) draws attention to the fact that the *R. flabellifera* of Vigors & Horsfield is not the same as *M. flabellifera*, Gm. but must be called *R. albiscapa*, Gould.

¹ Strickland in his review of Jerdon's 'Illustrations of Indian Ornithology' (Ann. & Mag. N. H. xv. p. 275) says that it is impossible to separate by well-defined generic characters Swainson's genus *Leucocerca* from *Rhipidura*.

Strickland (Ann. & Mag. N. Jules Verreaux, apparently recognizing specimen *a* as having been skinned by himself, wrote across the label in 1870 “tué par *J. Verreaux* au Knysa, 1827.” *Müller’s* name for this species is utterly inadmissible.

703. *Terpsiphone incii*.

Tchitrea incei, “*Gould*,” *Horsf. & Moore, Cat. B. E. I. Co. Mus.* p. 392.

a Malacca (*Johnson*) 1837. — *b* Malacca (*Matthew*) 1840. — *c* Malacca (*Williams*) 1847. — *d* (*Williams*).

c seems certainly to belong to this species, but I am not so sure as regards *a*, *b*, & *d*. The latter are all female or immature birds, and my materials are insufficient to determine them satisfactorily.

a Malacca (*Matthew*) 1840. —*b* Malacca (*Gardner*) 1846.

Strickland (*l. s. c.*) considered that this bird occupies an intermediate position between *Myiagra* and *Muscipeta* (= *Terpsiphone*), but that it was hardly sufficiently distinct from the former to form a generic division.

MELITHREPTUS.

Melithreptus, Vieillot, Anal. p. 46 (1816)¹.

¹ Strickland (Ann. & Mag. N. H. vi., p. 420) considered *Drepanis* to be a synonym of *Melithreptus* and used *Hematops* of Gould as the name of the present genus. As one of the species, the 'Héorotaire Fuscalbin,' included by Vieillot in *Melithreptus*, is the bird generally known as *M. lunulatus*, the use of *Melithreptus* as here employed seems justifiable.

a is probably the type of *D. melanotis*, Strickl. Both *a* and *b* (a female) are made up in the form of Cayenne skins. *c* is probably from Bogota.

As the Cayenne and New Granadian forms of this bird seem inseparable as species, the name they should bear is *D. angelica*, and not *D. melanotis*, that adopted by Mr ScIater and myself in our 'Nomenclator.'

a Brazil (*N. C. Strickland*) 1838. —*b* Trinidad (*P. L. Sclater*) 1850.

a, though marked in Mr Sclater's handwriting '*E. strictifrons*', is really a young male of *E. trinitatis*, the locality assigned to it being erroneous. *b* is doubtless one of the types of the species.

Euphonia serrirostris, D'Orb. & Lafr. Syn. Av. p. 30 (*partim?*).
a Brazil? (*Argent*) 1852.

Most probably from Bolivia. On examining D'Orbigny's specimens in the Paris Museum of his *E. serrirostris*, I came to the conclusion that they were females of the species described by Mr Sclater and myself from the Ucayali as *E. chrysopasta*. The bird figured by D'Orbigny (Voy. Am. Merid. Ois. pl. 21), however, represents the female of *E. chlorotica*. I have lately received specimens from Bolivia in no way differing from the Ucayali bird.

The name *Ampelis cincta* is usually attributed to Boddaert who, however, proposed no such title. The next in priority is *A. superbus* of Shaw, but as this name was suggested solely on account of certain orange-coloured spots produced by the application of heat to the purple under-plumage of a bird, which that author a few pages before rightly considered to be *A. cotinga* Linn., I think we may fairly be dispensed from the necessity of calling this species *Cotinga superba*. In a note on the label of this specimen Strickland remarks:—"Markings of face incorrectly described and figured by Gould." This is quite correct and the inaccuracy has misled Mr Lawrence into describing the same bird as *C. sumichrasti*. The only specimen that came under Gould's observation at the time he wrote his Monograph, which can be now traced, is that in the Paris Museum and this is undoubtedly the same as Mr Lawrence's bird.

THE HOLY SCRIPTURES, &c.

THE CAMBRIDGE PARAGRAPH BIBLE

of the Authorized English Version, with the Text Revised by a Collation of its Early and other Principal Editions, the Use of the Italic Type made uniform, the Marginal References remodelled, and a Critical Introduction prefixed, by the Rev. F. H. SCRIVENER, M.A., LL.D., Editor of the Greek Testament, Codex Augiensis, &c., and one of the Revisers of the Authorized Version. Crown 4to. cloth. gilt. 21s.

From the *Times*.

"Students of the Bible should be particularly grateful to (the Cambridge University Press) for having produced, with the able assistance of Dr Scrivener, a complete critical edition of the Authorized Version of the English Bible, an edition such as, to use the words of the Editor, 'would have been executed long ago had this version been nothing more than the greatest and best known of English classics.' Falling at a time when the formal revision of this version has been undertaken by a distinguished company of scholars and divines, the publication of this edition must be considered most opportune."

From the *Athenæum*.

"Apart from its religious importance, the English Bible has the glory, which but few sister versions indeed can claim, of being the chief classic of the language, of having, in conjunction with Shakspeare, and in an immeasurable degree more than he, fixed the language beyond any possibility of important change. Thus the recent contributions to the literature of the subject, by such workers as Mr Francis Fry and Canon Westcott, appeal to a wide range of sympathies; and to these may now be added Dr Scrivener, well known for his labours in the cause of the Greek Testament criticism, who has brought out, for the Syndics of the Cambridge University Press, an edition of the English Bible, according to the text of 1611, revised by a comparison with later issues on principles stated by him in his Introduction. Here he enters at length into the history of the chief editions of the version,

and of such features as the marginal notes, the use of italic type, and the changes of orthography, as well as into the most interesting question as to the original texts from which our translation is produced."

From the *Methodist Recorder*.

"This noble quarto of over 1300 pages is in every respect worthy of editor and publishers alike. The name of the Cambridge University Press is guarantee enough for its perfection in outward form, the name of the editor is equal guarantee for the worth and accuracy of its contents. Without question, it is the best Paragraph Bible ever published, and its reduced price of a guinea brings it within reach of a large number of students. . . But the volume is much more than a Paragraph Bible. It is an attempt, and a successful attempt, to give a critical edition of the Authorised English Version, not (let it be marked) a revision, but an exact reproduction of the original Authorised Version, as published in 1611, minus patent mistakes. This is doubly necessary at a time when the version is about to undergo revision. . . To all who at this season seek a suitable volume for presentation to ministers or teachers we earnestly commend this work."

From the *London Quarterly Review*.

"The work is worthy in every respect of the editor's fame, and of the Cambridge University Press. The noble English Version, to which our country and religion owe so much, was probably never presented before in so perfect a form."

"No one can say that the Old Testament is a dull or worn-out subject after reading this singularly attractive and also instructive commentary. Its wealth of literary and historical illustration surpasses anything to

which we can point in English exegesis of the Old Testament; indeed, even Delitzsch, whose pride it is to leave no source of illustration unexplored, is far inferior on this head to Dr Plumptre."—*Academy*, Sept. 10, 1881.

THE GOSPEL ACCORDING TO ST JOHN,

"*The Gospel according to St John, in Anglo-Saxon and Northumbrian Versions:* Edited for the Syndics of the University Press, by the Rev. Walter W. Skeat, M.A., Elrington and Bosworth Professor of Anglo-Saxon in the University of Cambridge, completes an undertaking designed and commenced by that distinguished scholar, J. M. Kemble, some forty years ago. He was not himself permitted to execute his scheme; he died before it was completed for St Matthew. The edition of that Gospel was finished by Mr., subsequently Archdeacon, Hardwick. The remaining Gospels

have had the good fortune to be edited by Professor Skeat, whose competency and zeal have left nothing undone to prove himself equal to his reputation, and to produce a work of the highest value to the student of Anglo-Saxon. The design was indeed worthy of its author. It is difficult to exaggerate the value of such a set of parallel texts. . . . Of the particular volume now before us, we can only say it is worthy of its two predecessors. We repeat that the service rendered to the study of Anglo-Saxon by this Synoptic collection cannot easily be overstated."—*Contemporary Review*.

THE MISSING FRAGMENT OF THE LATIN TRANSLATION OF THE FOURTH BOOK OF EZRA, discovered, and edited with an Introduction and Notes, and a facsimile of the MS., by ROBERT L. "It has been said of this book that it has

added a new chapter to the Bible, and, starting as the statement may at first sight appear, it is no exaggeration of the actual fact, if by the Bible we understand that of the larger size which contains the Apocrypha, and if the Second Book of Esdras can be fairly called a part of the Apocrypha."—*Saturday Review*.

THEOLOGY—(ANCIENT).

THE PALESTINIAN MISHNA,
By W. H. LOWE, M.A. Lecturer in Hebrew at Christ's College,
Cambridge. [In the Press.]

London: Cambridge Warehouse, 17 Paternoster Row.

SAYINGS OF THE JEWISH FATHERS,

comprising Pirque Aboth and Pereq R. Meir in Hebrew and English, with Critical and Illustrative Notes. By CHARLES TAYLOR, D.D. Master of St John's College, Cambridge, and Honorary Fellow of King's College, London. Demy 8vo. cloth. 10s.

"The 'Masseketh Aboth' stands at the head of Hebrew non-canonical writings. It is of ancient date, claiming to contain the dicta of teachers who flourished from B.C. 200 to the same year of our era. The precise time of its compilation in its present form is, of course, in doubt. Mr Taylor's explanatory and illustrative commentary is very full and satisfactory."—*Spectator*.

"If we mistake not, this is the first precise translation into the English language accompanied by scholarly notes, of any portion of the Talmud. In other words, it is the first instance of that most valuable and neglected portion of Jewish literature being treated in the same way as a Greek classic

in an ordinary critical edition. . . The Talmudic books, which have been so strangely neglected, we foresee will be the most important aids of the future for the proper understanding of the Bible. . . The *Sayings of the Jewish Fathers* may claim to be scholarly, and, moreover, of a scholarship unusually thorough and finished."—*Dublin University Magazine*.

"A careful and thorough edition which does credit to English scholarship, of a short treatise from the Mishna, containing a series of sentences or maxims ascribed mostly to Jewish teachers immediately preceding, or immediately following the Christian era. . ."—*Contemporary Review*.

THEODORE OF MOPSUESTIA'S COMMENTARY ON THE MINOR EPISTLES OF S. PAUL.

The Latin Version with the Greek Fragments, edited from the MSS. with Notes and an Introduction, by H. B. SWETE, D.D., Rector of Ashdon, Essex, and late Fellow of Gonville and Caius College, Cambridge. In Two Volumes. Vol. I., containing the Introduction, with Facsimiles of the MSS., and the Commentary upon Galatians—Colossians. Demy 8vo. 12s.

"In dem oben verzeichneten Buche liegt uns die erste Hälfte einer vollständigen, ebenso sorgfältig gearbeiteten wie schön ausgestatteten Ausgabe des Commentars mit ausführlichen Prolegomena und reichhaltigen kritischen und erläuternden Anmerkungen vor."—*Literarisches Centralblatt*.

"It is the result of thorough, careful, and patient investigation of all the points bearing on the subject, and the results are presented with admirable good sense and modesty. Mr Swete has prepared himself for his task by a serious study of the literature and history which are connected with it; and he has produced a volume of high value to the student, not merely of the theology of the fourth and fifth centuries, but of the effect of this theology on the later developments of doctrine and methods of interpretation, in the ages immediately following, and in the middle ages."—*Guardian*.

"Auf Grund dieser Quellen ist der Text bei Swete mit musterhafter Akribie hergestellt. Aber auch sonst hat der Herausgeber

mit unermüdlichem Fleisse und eingehendster Sachkenntniss sein Werk mit allen denjenigen Zugaben ausgerüstet, welche bei einer solchen Text-Ausgabe nur irgend erwartet werden können. . . . Von den drei Haupthandschriften . . . sind vortreffliche photographische Facsimile's beigegeben, wie überhaupt das ganze Werk von der *University Press* zu Cambridge mit bekannter Eleganz ausgestattet ist."—*Theologische Literaturzeitung*.

"It is a hopeful sign, amid forebodings which arise about the theological learning of the Universities, that we have before us the first instalment of a thoroughly scientific and painstaking work, commenced at Cambridge and completed at a country rectory."—*Church Quarterly Review* (Jan. 1881).

"Herrn Swete's Leistung ist eine so tüchtige dass wir das Werk in keinen besseren Händen wissen möchten, und mit den sichersten Erwartungen auf das Gelingen der Fortsetzung entgegen sehen."—*Göttingische gelehrte Anzeigen* (Sept. 1881).

edited by TEMPLE CHEVALLIER, B.D. late Fellow and Tutor of St Catharine's College, Cambridge. New Edition. Revised by R. Sinker, B.D., Librarian of Trinity College. Demy 8vo. 12s.

"A new edition of Bishop Pearson's famous work *On the Creed* has just been issued by the Cambridge University Press. It is the well-known edition of Temple Chevallier, thoroughly overhauled by the Rev. R. Sinker, of Trinity College. The whole text and notes have been most carefully examined and corrected, and special pains have been taken to verify the almost innumerable references. These have been more clearly and accurately given in very many places, and the citations

themselves have been adapted to the best and newest texts of the several authors—texts which have undergone vast improvements within the last two centuries. The Indices have also been revised and enlarged. Altogether this appears to be the most complete and convenient edition as yet published of a work which has long been recognised in all quarters as a standard one."—*Guardian*.

TWO FORMS OF PRAYER OF THE TIME OF QUEEN ELIZABETH. Now First Reprinted. Demy 8vo. 6d.

"From 'Collections and Notes' 1867—1876, by W. Pyne. It is mentioned specially in the Preface to the Parker Society's volume

of Occasional Forms of Prayer, but it had been lost sight of for 200 years.' By the kindness of the present possessor of this valuable volume, containing in all 25 distinct publications, I am enabled to reprint in the following pages the two Forms of Prayer supposed to have been lost."—*Extract from the PREFACE.*

SELECT DISCOURSES,

by JOHN SMITH, late Fellow of Queens' College, Cambridge. Edited by H. G. WILLIAMS, B.D. late Professor of Arabic. Royal 8vo. 7s. 6d.

"The 'Select Discourses' of John Smith, collected and published from his papers after his death, are, in my opinion, much the most considerable work left to us by this Cambridge School [the Cambridge Platonists]. They have a right to a place in English literary history."—Mr MATTHEW ARNOLD, in the *Contemporary Review*.

"Of all the products of the Cambridge School, the 'Select Discourses' are perhaps the highest, as they are the most accessible and the most widely appreciated...and indeed no spiritually thoughtful mind can read them unmoved. They carry us so directly into an atmosphere of divine philosophy, luminous

with the richest lights of meditative genius... He was one of those rare thinkers in whom largeness of view, and depth, and wealth of poetic and speculative insight, only served to evoke more fully the religious spirit, and while he drew the mould of his thought from Plotinus, he vivified the substance of it from St Paul."—Principal TULLOCH, *Rational Theology in England in the 17th Century*.

"We may instance Mr Henry Griffin Williams's revised edition of Mr John Smith's 'Select Discourses,' which have won Mr Matthew Arnold's admiration, as an example of worthy work for an University Press to undertake."—*Times*.

ARABIC, SANSKRIT AND SYRIAC.

POEMS OF BEHÁ ED DÍN ZOHEIR OF EGYPT.

With a Metrical Translation, Notes and Introduction, by E. H. PALMER, M.A., Barrister-at-Law of the Middle Temple, Lord Almoner's Professor of Arabic and Fellow of St John's College in the University of Cambridge. 3 vols. Crown 4to.

Vol. I. THE ARABIC TEXT. 10s. 6d.; Cloth extra. 15s.

Vol. II. ENGLISH TRANSLATION. 10s. 6d.; Cloth extra. 15s.

"Professor Palmer's activity in advancing Arabic scholarship has formerly shown itself in the production of his excellent Arabic Grammar, and his Descriptive Catalogue of Arabic MSS. in the Library of Trinity College, Cambridge. He has now produced an admirable text, which illustrates in a remarkable manner the flexibility and graces of the language he loves so well, and of which he seems to be perfect master.... The Syndicate of Cambridge University must not pass without the recognition of their liberality in bringing out, in a worthy form, so important an Arabic text. It is not the first time that Oriental scholarship has thus been wisely subsidised by Cambridge."—*Indian Mail*.

"It is impossible to quote this edition without an expression of admiration for the perfection to which Arabic typography has been brought in England in this magnificent Oriental work, the production of which redounds to the imperishable credit of the University of Cambridge. It may be pronounced one of the most beautiful Oriental books that have ever been printed in Europe: and the learning of the Editor worthily rivals the technical get-up of the creations of the soul of one of the most tasteful poets of Islám, the study of which will contribute not a little to save honour of the poetry of the Arabs."—*MYTHOLOGY AMONG THE HEBREWS (Engl. Transl.)*, p. 194.

"For ease and facility, for variety of

metre, for imitation, either designed or unconscious, of the style of several of our own poets, these versions deserve high praise. We have no hesitation in saying that in both Prof. Palmer has made an addition to Oriental literature for which scholars should be grateful; and that, while his knowledge of Arabic is a sufficient guarantee for his mastery of the original, his English compositions are distinguished by versatility, command of language, rhythmical cadence, and, as we have remarked, by not unskillful imitations of the styles of several of our own favourite poets, living and dead."—*Saturday Review*.

"This sumptuous edition of the poems of Behá-ed-din Zoheir is a very welcome addition to the small series of Eastern poets accessible to readers who are not Orientalists. ... In all there is that exquisite finish of which Arabic poetry is susceptible in so rare a degree. The form is almost always beautiful, be we thought what it may. But this, of course, can only be fully appreciated by Orientalists. And this brings us to the translation. It is excellently well done. Mr Palmer has tried to imitate the fall of the original in his selection of the English metre for the various pieces, and thus contrives to convey a faint idea of the graceful flow of the Arabic. Altogether the inside of the book is worthy of the beautiful arabesque binding that rejoices the eye of the lover of Arab art."—*Academy*.

"One of the best editions of the masterpiece of Greek tragedy."—*Athenæum.*

"It is needless to multiply proofs of the value of this volume alike to the poetical translator, the critical scholar, and the ethical student. We must be contented to thank Professor Kennedy for his admirable execution of a great undertaking."—*Sat. Rev.*

"Let me say that I think it a most admirable piece of the highest criticism. . . . I like

your Preface extremely; it is just to the point."—Professor PALEY.

"Professor Kennedy has conferred a boon on all teachers of the Greek classics, by causing the substance of his lectures at Cambridge on the Agamemnon of Æschylus to be published... This edition of the Agamemnon is one which no classical master should be without."—*Examiner.*

THE ŒDIPUS TYRANNUS OF SOPHOCLES by the same Editor. Crown 8vo. Cloth 6s.

"Dr Kennedy's edition of the *Œdipus Tyrannus* is a worthy companion to his *Agamemnon*, and we may say at once that no more valuable contribution to the study of Sophocles has appeared of late years. Besides the text and notes, the volume contains a most interesting introduction to and analysis of the play, a rhythmical trans-

lation, and three indices. The first of these consists of a list of words and phrases either uncommon in themselves, or employed in unusual ways: in the second we find various particles as exhibited in the play; while the third gives valuable information on grammatical points as illustrated by the usage of Sophocles."—*Saturday Review.*

THE RHETORIC. With a Commentary by the late E. M. COPE, Fellow of Trinity College, Cambridge, revised and edited by J. E. SANDYS, M.A., Fellow and Tutor of St John's College, Cambridge, and Public Orator. With a biographical Memoir by H. A. J. MUNRO, M.A. Three Volumes, Demy 8vo. £1. 11s. 6d.

"This work is in many ways creditable to the University of Cambridge. And while it must ever be regretted that a work so laborious should not have received the last touches of its author, the warmest admiration is due to Mr Sandys, for the manly, unselfish, and unflinching spirit in which he has performed his most difficult and delicate task. If an English student wishes to have a full conception of

what is contained in the *Rhetoric* of Aristotle, to Mr Cope's edition he must go."—*Academy*.

"Mr Sandys has performed his arduous duties with marked ability and admirable tact. . . . In every part of his work—revising, supplementing, and completing—he has done exceedingly well."—*Examiner*.

PRIVATE ORATIONS OF DEMOSTHENES, with Introductions and English Notes, by F. A. PALEY, M.A. Editor of Aeschylus, etc. and J. E. SANDYS, M.A. Fellow and Tutor of St John's College, and Public Orator in the University of Cambridge.

PART I. Contra Phormionem, Lacritum, Pantaenetum, Boeotum de Nomine, Boeotum de Dote, Dionysodorum. Crown 8vo. cloth. 6s.

"Mr Paley's scholarship is sound and accurate, his experience of editing wide, and if he is content to devote his learning and abilities to the production of such manuals as these, they will be received with gratitude throughout the higher schools of the country. Mr Sandys is deeply read in the German

literature which bears upon his author, and the elucidation of matters of daily life, in the delineation of which Demosthenes is so rich, obtains full justice at his hands. . . . We hope this edition may lead the way to a more general study of these speeches in schools than has hitherto been possible."—*Academy*.

PART II. Pro Phormione, Contra Stephanum I. II.; Nicostratum, Cononem, Calliclem. 7s. 6d.

"To give even a brief sketch of these speeches [*Pro Phormione* and *Contra Stephanum*] would be incompatible with our limits, though we can hardly conceive a task more useful to the classical or professional scholar than to make one for himself. . . . It is a great boon to those who set themselves to unravel the thread of arguments pro and con to have the aid of Mr Sandys's excellent running commentary. . . . and no one can say that he is ever deficient

in the needful help which enables us to form a sound estimate of the rights of the case. . . . It is long since we have come upon a work evincing more pains, scholarship, and varied research and illustration than Mr Sandys's contribution to the 'Private Orations of Demosthenes'."—*Sat. Rev.*

" . . . the edition reflects credit on Cambridge scholarship, and ought to be extensively used."—*Athenæum*.

PINDAR.

OLYMPIAN AND PYTHIAN ODES. With Notes Explanatory and Critical, Introductions and Introductory Essays. Edited by C. A. M. FENNEL, M.A., late Fellow of Jesus College. Crown 8vo. cloth. 9s.

"Mr Fennell deserves the thanks of all classical students for his careful and scholarly edition of the Olympian and Pythian odes. He brings to his task the necessary enthusiasm for his author, great industry, a sound judgment, and, in particular, copious and minute learning in comparative philology. To his qualifications in this last respect every page bears witness."—*Athenæum*.

"Considered simply as a contribution to

the study and criticism of Pindar, Mr Fennell's edition is a work of great merit. But it has a wider interest, as exemplifying the change which has come over the methods and aims of Cambridge scholarship within the last ten or twelve years. . . . Altogether, this edition is a welcome and wholesome sign of the vitality and development of Cambridge scholarship, and we are glad to see that it is to be continued."—*Saturday Review*.

THE BACCHAE OF EURIPIDES.

with Introduction, Critical Notes, and Archæological¹ Illustrations, by J. E. SANDYS, M.A., Fellow and Tutor of St John's College, Cambridge, and Public Orator. Crown 8vo cloth. 10s. 6d.

"Of the present edition of the *Bacchæ* by Mr Sandys we may safely say that never before has a Greek play, in England at least, had fuller justice done to its criticism, interpretation, and archæological illustration, whether for the young student or the more advanced scholar. The Cambridge Public Orator may be said to have taken the lead in issuing a complete edition of a Greek play, which is destined perhaps to gain redoubled favour now that the study of ancient monuments has been applied to its illustration."—*Saturday Review*.

"Mr Sandys has done well by his poet and by his University. He has given a most welcome gift to scholars both at home and abroad. The illustrations are aptly chosen and delicately executed, and the *apparatus criticus*, in the way both of notes and indices is very complete."—*Notes and Queries*.

"The volume is interspersed with well-executed woodcuts, and its general attractiveness of form reflects great credit on the University Press. In the notes Mr Sandys has more than sustained his well-earned reputation as a careful and learned editor, and shows considerable advance in freedom and lightness of style. . . . Under such circumstances it is superfluous to say that for the purposes of teachers and advanced students this handsome edition far surpasses all its predecessors. The volume will add to the already wide popularity of a unique drama, and must be reckoned among the most im-

portant classical publications of the year."—*Athenæum*.

"This edition of a Greek play deserves more than the passing notice accorded to ordinary school editions of the classics. It has not, like so many such books, been hastily produced to meet the momentary need of some particular examination; but it has employed for some years the labour and thought of a highly finished scholar, whose aim seems to have been that his book should go forth *totus teres atque rotundus*, armed at all points with all that may throw light upon its subject. The result is a work which will not only assist the schoolboy or undergraduate in his tasks, but will adorn the library of the scholar." . . . "The description of the woodcuts abounds in interesting and suggestive information upon various points of ancient art, and is a further instance of the very thorough as well as scholar-like manner in which Mr Sandys deals with his subject at every point. The commentary (pp. 87—240) bears the same stamp of thoroughness and high finish as the rest of the work. While questions of technical grammar receive due attention, textual criticism, philology, history, antiquities, and art are in turn laid under contribution for the elucidation of the poet's meaning. We must leave our readers to use and appreciate for themselves Mr Sandys' assistance."—*The Guardian*.

Head Master of Ipswich School, late Fellow of Trinity College, Cambridge, Classical Examiner to the University of London. **Fourth Edition.** Revised and considerably enlarged. Crown 8vo. 9s.

"Dr Holden truly states that 'Text, Analysis, and Commentary in this third edition have been again subjected to a thorough revision.' It is now certainly the best edition extant. . . . The Introduction (after Heine) and notes leave nothing to be desired in point of fulness, accuracy, and neatness; the typographical execution will satisfy the most fastidious eye."—*Notes and Queries*.

"Dr Holden has issued an edition of what is perhaps the easiest and most popular of Cicero's philosophical works, the *de Officiis*, which, especially in the form which it has now assumed after two most thorough revisions, leaves little or nothing to be desired in the fullness and accuracy of its treatment alike of the matter and the language."—*Academy*.

"Such editions as that of which Prof. Mayor has given us the first instalment will doubtless do much to remedy this undeserved neglect. It is one on which great pains and much learning have evidently been expended, and is in every way admirably suited to meet the needs of the student. . . . The notes of the editor are all that could be expected from his well-known learning and scholarship. . . . It is needless, therefore, to say

[Vol. II. *In the Press.*
 that all points of syntax or of Ciceronian usage which present themselves have been treated with full mastery. . . . "The volume of Professor Stokes's papers contains much more than his hydrodynamical papers. The undulatory theory of light is treated, and the difficulties connected with its application to certain phenomena, such as aberration, are carefully examined and resolved. Such difficulties are commonly passed over with scant notice in the text-books. . . . Those to whom difficulties like these are real stumbling-blocks will still turn for enlightenment to Professor Stokes's old, but still fresh

and still necessary, dissertations. There nothing is slurred over, nothing extenuated. We learn exactly the weaknesses of the theory, and the direction in which the completer theory of the future must be sought for. The same spirit pervades the papers on pure mathematics which are included in the volume. They have a severe accuracy of style which well befits the subtle nature of the subjects, and inspires the completest confidence in their author."—*The Times.*

By JOSEPH FOURIER. Translated, with Notes, by A. FREEMAN, M.A. Fellow of St John's College, Cambridge. Demy 8vo. 16s.

"It is time that Fourier's masterpiece, *The Analytical Theory of Heat*, translated by Mr Alex. Freeman, should be introduced to those English students of Mathematics who do not follow with freedom a treatise in any language but their own. It is a model of mathematical reasoning applied to physical phenomena, and is remarkable for the ingenuity of the analytical process employed by the author."—*Contemporary Review*, October, 1878.

"There cannot be two opinions as to the

value and importance of the *Théorie de la Chaleur*. It has been called 'an exquisite mathematical poem,' not once but many times, independently, by mathematicians of different schools. Many of the very greatest of modern mathematicians regard it, justly, as the key which first opened to them the treasure-house of mathematical physics. It is still the text-book of Heat Conduction, and there seems little present prospect of its being superseded, though it is already more than half a century old."—*Nature*.

A SELECTION OF THE STATE TRIALS.

By J. W. WILLIS-BUND, M.A., LL.B., Barrister-at-Law, Professor of Constitutional Law and History, University College, London. Vol. 1. Trials for Treason (1327—1660). Crown 8vo. cloth, 18s.

"A great and good service has been done to all students of history, and especially to those of them who look to it in a legal aspect, by Prof. J. W. Willis-Bund in the publication of a *Selection of Cases from the State Trials*. . . . Professor Willis-Bund has been very careful to give such selections from the State Trials as will best illustrate those points in what may be called the growth of the Law of Treason which he wishes to bring clearly under the notice of the student, and the result is, that there is not a page in the book which has not its own lesson. . . . In all respects, so far as we have been able to test it, this book is admirably done."—*Scotsman*.

"Mr Willis-Bund has edited 'A Selection of Cases from the State Trials' which is likely to form a very valuable addition to the standard literature. . . . There can be no doubt, therefore, of the interest that can be found in the State trials. But they are large and unwieldy, and it is impossible for the general reader to come across them. Mr Willis-Bund has therefore done good service in making a selection that is in the first volume reduced to a commodious form."—*The Examiner*.

"This work is a very useful contribution to that important branch of the constitutional history of England which is concerned with the growth and development of the law of treason, as it may be gathered from trials before the ordinary courts. The author has very wisely distinguished these cases from

those of impeachment for treason before Parliament, which he proposes to treat in a future volume under the general head 'Proceedings in Parliament.'"—*The Academy*.

"This is a work of such obvious utility that the only wonder is that no one should have undertaken it before. . . . In many respects therefore, although the trials are more or less abridged, this is for the ordinary student's purpose not only a more handy, but a more useful work than Howell's."—*Saturday Review*.

"Within the boards of this useful and handy book the student will find everything he can desire in the way of lists of cases given at length or referred to, and the statutes bearing on the text arranged chronologically. The work of selecting from Howell's bulky series of volumes has been done with much judgment, merely curious cases being excluded, and all included so treated as to illustrate some important point of constitutional law."—*Glasgow Herald*.

"Mr Bund's object is not the romance, but the constitutional and legal bearings of that great series of *causes célèbres* which is unfortunately not within easy reach of readers not happy enough to possess valuable libraries. . . . Of the importance of this subject, or of the want of a book of this kind, referring not vaguely but precisely to the grounds of constitutional doctrines, both of past and present times, no reader of history can feel any doubt."—*Daily News*.

collected, arranged, and annotated by BRYAN WALKER, M.A. LL.D., Law Lecturer of St John's College, and late Fellow of Corpus Christi College, Cambridge. Crown 8vo., Cloth, Price 6s.

"This is one of the latest, we believe quite the latest, of the contributions made to legal scholarship by that revived study of the Roman Law at Cambridge which is now so marked a feature in the industrial life of the University. . . . In the present book we have the fruits of the same kind of thorough and well-ordered study which was brought to bear upon the notes to the Com-

mentaries and the Institutes . . . Hitherto the Edict has been almost inaccessible to the ordinary English student, and such a student will be interested as well as perhaps surprised to find how abundantly the extant fragments illustrate and clear up points which have attracted his attention in the Commentaries, or the Institutes, or the Digest."—*Law Times*.

THE COMMENTARIES OF GAIUS AND RULES OF ULPIAN. (New Edition, revised and enlarged.)

With a Translation and Notes, by J. T. ABDY, LL.D., Judge of County Courts, late Regius Professor of Laws in the University of Cambridge, and BRYAN WALKER, M.A., LL.D., Law Lecturer of St John's College, Cambridge, formerly Law Student of Trinity Hall and Chancellor's Medallist for Legal Studies. Crown 8vo. 16s.

"As scholars and as editors Messrs Abdy and Walker have done their work well. . . . For one thing the editors deserve special commendation. They have presented Gaius to the reader with few notes and those merely by way of reference or necessary

explanation. Thus the Roman jurist is allowed to speak for himself, and the reader feels that he is really studying Roman law in the original, and not a fanciful representation of it."—*Athenæum*.

THE INSTITUTES OF JUSTINIAN,

translated with Notes by J. T. ABDY, LL.D., Judge of County Courts, late Regius Professor of Laws in the University of Cambridge, and formerly Fellow of Trinity Hall; and BRYAN WALKER, M.A., LL.D., Law Lecturer of St John's College, Cambridge; late Fellow and Lecturer of Corpus Christi College; and formerly Law Student of Trinity Hall. Crown 8vo. 16s.

"We welcome here a valuable contribution to the study of jurisprudence. The text of the *Institutes* is occasionally perplexing, even to practised scholars, whose knowledge of classical models does not always avail them in dealing with the technicalities of legal phraseology. Nor can the ordinary dictionaries be expected to furnish all the help that is wanted. This translation will then be of great use. To the ordinary student, whose

attention is distracted from the subject-matter by the difficulty of struggling through the language in which it is contained, it will be almost indispensable."—*Spectator*.

"The notes are learned and carefully compiled, and this edition will be found useful to students."—*Law Times*.

"Dr Abdy and Dr Walker have produced a book which is both elegant and useful."—*Athenæum*.

SELECTED TITLES FROM THE DIGEST,

annotated by B. WALKER, M.A., LL.D. Part I. *Mandati vel Contra*. Digest XVII. I. Crown 8vo. Cloth. 5s.

"This small volume is published as an experiment. The author proposes to publish an annotated edition and translation of several books of the Digest if this one is received with favour. We are pleased to be able to

say that Mr Walker deserves credit for the way in which he has performed the task undertaken. The translation, as might be expected, is scholarly."—*Law Times*.

HISTORY.

THE GROWTH OF ENGLISH INDUSTRY
AND COMMERCE,

by W. CUNNINGHAM, M.A., late Deputy to the Knightbridge Professor in the University of Cambridge. With Maps and Charts. Crown 8vo. Cloth. 12s.

"He is, however, undoubtedly sound in the main, and his work deserves recognition as the result of immense industry and re-

search in a field in which the labourers have hitherto been comparatively few."—*Scotsman*, April 14, 1882.

LIFE AND TIMES OF STEIN, OR GERMANY
AND PRUSSIA IN THE NAPOLEONIC AGE,

by J. R. SEELEY, M.A., Regius Professor of Modern History in the University of Cambridge, with Portraits and Maps. 3 Vols. Demy 8vo. 48s.

"If we could conceive anything similar to a protective system in the intellectual department, we might perhaps look forward to a time when our historians would raise the cry of protection for native industry. Of the unquestionably greatest German men of modern history—I speak of Frederick the Great, Goethe and Stein—the first two found long since in Carlyle and Lewes biographers who have undoubtedly driven their German competitors out of the field. And now in the year just past Professor Seeley of Cambridge has presented us with a biography of Stein which, though it modestly declines competition with German works and disowns the presumption of teaching us Germans our own history, yet casts into the shade by its brilliant superiority all that we have ourselves hitherto written about Stein.... In five long chapters Seeley expounds the legislative and administrative reforms, the emancipation of the person and the soil, the beginnings of free administration and free trade, in short the foundation of modern Prussia, with more exhaustive thoroughness, with more penetrating insight, than any one had done before."—*Deutsche Rundschau*.

"Dr Busch's volume has made people think and talk even more than usual of Prince Bismarck, and Professor Seeley's very learned work on Stein will turn attention to an earlier and an almost equally eminent German statesman. . . . It is soothing to the national self-respect to find a few Englishmen, such as the late Mr Lewes and Professor Seeley,

doing for German as well as English readers what many German scholars have done for us."—*Times*.

"In a notice of this kind scant justice can be done to a work like the one before us; no short *résumé* can give even the most meagre notion of the contents of these volumes, which contain no page that is superfluous, and none that is uninteresting. . . . To understand the Germany of to-day one must study the Germany of many yesterdays, and now that study has been made easy by this work, to which no one can hesitate to assign a very high place among those recent histories which have aimed at original research."—*Athenæum*.

"The book before us fills an important gap in English—nay, European—historical literature, and bridges over the history of Prussia from the time of Frederick the Great to the days of Kaiser Wilhelm. It thus gives the reader standing ground whence he may regard contemporary events in Germany in their proper historic light. . . . We congratulate Cambridge and her Professor of History on the appearance of such a noteworthy production. And we may add that it is something upon which we may congratulate England that on the especial field of the Germans, history, on the history of their own country, by the use of their own literary weapons, an Englishman has produced a history of Germany in the Napoleonic age far superior to any that exists in German."—*Examiner*.

THE UNIVERSITY OF CAMBRIDGE FROM
THE EARLIEST TIMES TO THE ROYAL
INJUNCTIONS OF 1535,

by JAMES BASS MULLINGER, M.A. Demy 8vo. cloth (734 pp.), 12s.

"We trust Mr Mullinger will yet continue his history and bring it down to our own day."—*Academy*.

"He has brought together a mass of instructive details respecting the rise and progress, not only of his own University, but of all the principal Universities of the Middle Ages. . . . We hope some day that he may continue his labours, and give us a history of

the University during the troublous times of the Reformation and the Civil War."—*Athenæum*.

"Mr Mullinger's work is one of great learning and research, which can hardly fail to become a standard book of reference on the subject. . . . We can most strongly recommend this book to our readers."—*Spectator*.

CHRONOLOGICAL TABLES OF GREEK HISTORY.

Accompanied by a short narrative of events, with references to the sources of information and extracts from the ancient authorities, by CARL PETER. Translated from the German by G. CHAWNER, M.A., Fellow and Lecturer of King's College, Cambridge. Demy 4to. 10s.

HISTORY OF THE COLLEGE OF ST JOHN THE EVANGELIST,

by THOMAS BAKER, B.D., Ejected Fellow. Edited by JOHN E. B. MAYOR, M.A., Fellow of St John's. Two Vols. Demy 8vo. 24s.

"To antiquaries the book will be a source of almost inexhaustible amusement, by historians it will be found a work of considerable service on questions respecting our social progress in past times; and the care and thoroughness with which Mr Mayor has discharged his editorial functions are creditable to his learning and industry."—*Athenæum*.

"The work displays very wide reading, and it will be of great use to members of the college and of the university, and, perhaps, of still greater use to students of English history, ecclesiastical, political, social, literary and academical, who have hitherto had to be content with 'Dyer.'"—*Academy*.

HISTORY OF NEPĀL,

translated by MUNSHĪ SHEW SHUNKER SINGH and PANDIT SHRĪ GUNĀNAND; edited with an Introductory Sketch of the Country and People by Dr D. WRIGHT, late Residency Surgeon at Kāthmāndū, and with facsimiles of native drawings, and portraits of Sir JUNG BAHĀDUR, the KING OF NEPĀL, &c. Super-royal 8vo. Price 21s.

"The Cambridge University Press have done well in publishing this work. Such translations are valuable not only to the historian but also to the ethnologist;.....Dr Wright's Introduction is based on personal inquiry and observation, is written intelligently and candidly, and adds much to the value of the volume. The coloured litho-

graphic plates are interesting."—*Nature*.

"The history has appeared at a very opportune moment...The volume...is beautifully printed, and supplied with portraits of Sir Jung Bahadur and others, and with excellent coloured sketches illustrating Nepaulese architecture and religion."—*Examiner*.

SCHOLAE ACADEMICAE:

Some Account of the Studies at the English Universities in the Eighteenth Century. By CHRISTOPHER WORDSWORTH, M.A., Fellow of Peterhouse; Author of "Social Life at the English Universities in the Eighteenth Century." Demy 8vo. cloth. 15s.

"The general object of Mr Wordsworth's book is sufficiently apparent from its title. He has collected a great quantity of minute and curious information about the working of Cambridge institutions in the last century, with an occasional comparison of the corresponding state of things at Oxford...To a great extent it is purely a book of reference, and as such it will be of permanent value for the historical knowledge of English education and learning."—*Saturday Review*.

"Only those who have engaged in like labours will be able fully to appreciate the sustained industry and conscientious accuracy discernible in every page. . . . Of the whole volume it may be said that it is a genuine service rendered to the study of University history, and that the habits of thought of any writer educated at either seat of learning in the last century will, in many cases, be far better understood after a consideration of the materials here collected."—*Academy*.

MISCELLANEOUS.

LECTURES ON TEACHING,

Delivered in the University of Cambridge in the Lent Term, 1880.

By J. G. FITCH, M.A., Her Majesty's Inspector of Schools.

Crown 8vo. cloth. New Edition. 6s.

"The lectures will be found most interesting, and deserve to be carefully studied, not only by persons directly concerned with instruction, but by parents who wish to be able to exercise an intelligent judgment in the choice of schools and teachers for their children. For ourselves, we could almost wish to be of school age again, to learn history and geography from some one who could teach them after the pattern set by Mr Fitch to his audience. . . . But perhaps Mr Fitch's observations on the general conditions of school-work are even more important than what he says on this or that branch of study."—*Saturday Review*.

"It comprises fifteen lectures, dealing with such subjects as organisation, discipline, examining, language, fact knowledge, science, and methods of instruction; and though the lectures make no pretention to systematic or exhaustive treatment, they yet leave very little of the ground uncovered; and they combine in an admirable way the exposition of sound principles with practical suggestions and illustrations which are evidently derived from wide and varied experience, both in teaching and in examining. While Mr Fitch addresses himself specially to secondary school-masters, he does not by any means disregard or ignore the needs of the primary school."—*Scotsman*.

"It would be difficult to find a lecturer better qualified to discourse upon the practical aspects of the teacher's work than Mr Fitch. He has had very wide and varied experience as a teacher, a training college officer, an Inspector of schools, and as Assistant Commissioner to the late Endowed Schools Commission. While it is difficult for anyone to make many original remarks on this subject Mr Fitch is able to speak with authority upon various controverted points, and to give us the results of many years' study, corrected by the observation of the various schemes and methods pursued in schools of all grades and characters."—*The Schoolmaster*.

"All who are interested in the management of schools, and all who have made the profession of a teacher the work of their lives, will do well to study with care these results of a large experience and of wide observation. It is not, we are told, a manual of method; rather, we should say, it is that and much more. As a manual of method it is far superior to anything we have seen. Its suggestions of practical means and methods are very valuable; but it has an element which a mere text-book of rules for imparting knowledge does not contain. Its tone is lofty; its spirit religious; its ideal of

the teacher's aim and life pure and good. . . . The volume is one of great practical value. It should be in the hands of every teacher, and of every one preparing for the office of a teacher. There are many besides these who will find much in it to interest and instruct them, more especially parents who have children whom they can afford to keep at school till their eighteenth or nineteenth year."—*The Nonconformist and Independent*.

"As principal of a training college and as a Government inspector of schools, Mr Fitch has got at his fingers' ends the working of primary education, while as assistant commissioner to the late Endowed Schools Commission he has seen something of the machinery of our higher schools. . . . Mr Fitch's book covers so wide a field and touches on so many burning questions that we must be content to recommend it as the best existing *vade mecum* for the teacher. . . . He is always sensible, always judicious, never wanting in tact. . . . Mr Fitch is a scholar; he pretends to no knowledge that he does not possess; he brings to his work the ripe experience of a well-stored mind, and he possesses in a remarkable degree the art of exposition."—*Pall Mall Gazette*.

"In his acquaintance with all descriptions of schools, their successes and their shortcomings, Mr Fitch has great advantages both in knowledge and experience; and if his work receives the attention it deserves, it will tend materially to improve and equalize the methods of teaching in our schools, to whatever class they may belong."—*St James's Gazette*.

"In no other work in the English language, so far as we know, are the principles and methods which most conduce to successful teaching laid down and illustrated with such precision and fulness of detail as they are here."—*Leeds Mercury*.

"The book is replete with practical sagacity, and contains on almost all points of interest to the teaching profession suggestive remarks resting evidently on a wide and thoughtful experience of school methods. There are few teachers who will not find aids to reflection in the careful analysis of the qualities required for success in teaching, in the admirable exposition of the value of orderly, methodical arrangement both for instruction and discipline, and in the painstaking discussion of school punishments contained in the earlier section of the volume. . . . We recommend it in all confidence to those who are interested in the problems with which the teaching profession has to deal."—*Galignani's Messenger*.

Rev. A. CARR, M.A. With 4 Maps. 4s. 6d.

“With the ‘Notes,’ in the volume before us, we are much pleased; so far as we have searched, they are scholarly and sound. The quotations from the Classics are apt; and the references to modern Greek form a pleasing feature.”—*The Churchman*.

“Mr Carr, whose ‘Notes on St Luke’s Gospel’ must have thoroughly approved themselves to all who have used them, has followed the same line in this volume of St Matthew. In both works a chief object has been ‘to connect more closely the study of the Classics with the reading of the New Testament.’ . . . Copious illustrations, gathered from a great variety of sources, make his notes a very valuable aid to the student. They are indeed remarkably interesting, while all explanations on meanings, applications, and the like are distinguished by their lucidity and good sense.”—*Pall Mall Gazette*.

I. GREEK.

THE ANABASIS OF XENOPHON, BOOK IV. With a Map and English Notes by ALFRED PRETOR, M.A., Fellow of St Catharine's College, Cambridge; Editor of *Persius* and *Cicero ad Atticum* Book I. *Price 2s.*

"In Mr Pretor's edition of the Anabasis the text of Kühner has been followed in the main, while the exhaustive and admirable notes of the great German editor have been largely utilised. These notes deal with the minutest as well as the most important difficulties in construction, and all questions of history, antiquity, and geography are briefly but very effectually elucidated."—*The Examiner*.

"We welcome this addition to the other books of the *Anabasis* so ably edited by Mr Pretor. Although originally intended for the use of candidates at the university local examinations, yet this edition will be found adapted not only to meet the wants of the junior student, but even advanced scholars will find much in this work that will repay its perusal."—*The Schoolmaster*.

"Mr Pretor's 'Anabasis of Xenophon, Book IV,' displays a union of accurate Cambridge scholarship, with experience of what is required by learners gained in examining middle-class schools. The text is large and clearly printed, and the notes explain all difficulties. . . . Mr Pretor's notes seem to be all that could be wished as regards grammar, geography, and other matters."—*The Academy*.

BOOKS I. III. & V. By the same Editor. *2s. each.*

BOOKS II. VI. and VII. By the same Editor. *2s. 6d. each.*

"Another Greek text, designed it would seem for students preparing for the local examinations, is 'Xenophon's Anabasis,' Book II., with English Notes, by Alfred Pretor, M.A. The editor has exercised his usual discrimination in utilising the text and notes of Kühner, with the occasional assistance of the best hints of Schneider, Vollbrecht and Macmichael on critical matters, and of Mr R. W. Taylor on points of history and geography. . . . When Mr Pretor commits himself to Commentator's work, he is eminently helpful. . . . Had we to introduce a young Greek scholar to Xenophon, we should esteem ourselves fortunate in having Pretor's text-book as our chart and guide."—*Contemporary Review*.

THE ANABASIS OF XENOPHON, by A. PRETOR, M.A.,
Text and Notes, complete in two Volumes. *Price 7s. 6d.*

AGESILAUS OF XENOPHON. The Text revised with Critical and Explanatory Notes, Introduction, Analysis, and Indices. By H. HAILSTONE, M.A., late Scholar of Peterhouse, Cambridge, Editor of Xenophon's Hellenics, etc. *2s. 6d.*

ARISTOPHANES—AVES. By the same Editor. *New Edition. 3s. 6d.*

"The notes to both plays are excellent. Much has been done in these two volumes to render the study of Aristophanes a real treat to a boy instead of a drudgery, by helping him to understand the fun and to express it in his mother tongue."—*The Examiner*.

ARISTOPHANES—PLUTUS. By the same Editor. *3s. 6d.*

II. LATIN.

M. T. CICERONIS DE AMICITIA. Edited by J. S.
 REID, M.L., Fellow and Assistant Tutor of Gonville and Caius College,
 Cambridge. Price 3s.

"Mr Reid has decidedly attained his aim, namely, 'a thorough examination of the Latinity of the dialogue.' . . . The revision of the text is most valuable, and comprehends sundry acute corrections. . . . This volume, like Mr Reid's other editions, is a solid gain to the scholarship of the country."—*Athenæum*.

"A more distinct gain to scholarship is Mr Reid's able and thorough edition of the *De Amicitia* of Cicero, a work of which, whether we regard the exhaustive introduction or the instructive and most suggestive commentary, it would be difficult to speak too highly. . . . When we come to the commentary, we are only amazed by its fulness in proportion to its bulk. Nothing is overlooked which can tend to enlarge the learner's general knowledge of Ciceronian Latin or to elucidate the text."—*Saturday Review*.

M. T. CICERONIS CATO MAJOR DE SENECTUTE.

Edited by J. S. REID, M.L. Price 3s. 6d.

"The notes are excellent and scholarlike, adapted for the upper forms of public schools, and likely to be useful even to more advanced students."—*Guardian*.

M. T. CICERONIS ORATIO PRO ARCHIA POETA.

Edited by J. S. REID, M.L. Price 1s. 6d.

"It is an admirable specimen of careful editing. An Introduction tells us everything we could wish to know about Archias, about Cicero's connexion with him, about the merits of the trial, and the genuineness of the speech. The text is well and carefully printed. The notes are clear and scholar-like. . . . No boy can master this little volume without feeling that he has advanced a long step in scholarship."—*The Academy*.

M. T. CICERONIS PRO L. CORNELIO BALBO ORATIO. Edited by J. S. REID, M.L. Fellow of Caius College, Camb. Price 1s. 6d.

"We are bound to recognize the pains devoted in the annotation of these two orations to the minute and thorough study of their Latinity, both in the ordinary notes and in the textual appendices."—*Saturday Review*.

M. T. CICERONIS PRO P. CORNELIO SULLA ORATIO. Edited by J. S. REID, M.L. [In the Press.]

M. T. CICERONIS PRO CN. PLANCIO ORATIO. Edited by H. A. HOLDEN, LL.D., Head Master of Ipswich School. Price 4s. 6d.

"As a book for students this edition can have few rivals. It is enriched by an excellent introduction and a chronological table of the principal events of the life of Cicero; while in its appendix, and in the notes on the text which are added, there is much of the greatest value. The volume is neatly got up, and is in every way commendable."—*The Scotsman*.

"Dr Holden's own edition is all that could be expected from his elegant and practised scholarship. . . . Dr Holden has evidently made up his mind as to the character of the commentary most likely to be generally useful; and he has carried out his views with admirable thoroughness."—*Academy*.

"Dr Holden has given us here an excellent edition. The commentary is even unusually full and complete; and after going through it carefully, we find little or nothing to criticize. There is an excellent introduction, lucidly explaining the circumstances under which the speech was delivered, a table of events in the life of Cicero and a useful index." *Spectator*, Oct. 29, 1881.

"Those students are to be deemed fortunate who have to read Cicero's lively and brilliant oration for L. Murena with Mr Heitland's handy edition, which may be pronounced 'four-square' in point of equipment, and which has, not without good reason, attained the honours of a second edition."—*Saturday Review*.

P. OVIDII NASONIS FASTORUM LIBER VI. With a Plan of Rome and Notes by A. SIDGWICK, M.A. Tutor of Corpus Christi College, Oxford. *Price 1s. 6d.*

"Mr Sidgwick's editing of the Sixth Book of Ovid's *Fasti* furnishes a careful and serviceable volume for average students. It eschews 'construes' which supersede the use of the dictionary, but gives full explanation of grammatical usages and historical and mythical allusions, besides illustrating peculiarities of style, true and false derivations, and the more remarkable variations of the text."—*Saturday Review*.

"It is eminently good and useful. . . . The Introduction is singularly clear on the astronomy of Ovid, which is properly shown to be ignorant and confused; there is an excellent little map of Rome, giving just the places mentioned in the text and no more; the notes are evidently written by a practical schoolmaster."—*The Academy*.

"In an unusually succinct introduction he gives all the preliminary and collateral information that is likely to be useful to a young student; and, wherever we have examined his notes, we have found them eminently practical and satisfying. . . . The book may well be recommended for careful study in school or college."—*Saturday Review*.

"The notes are scholarly, short, and a real help to the most elementary beginners in Latin prose."—*The Examiner*.

"Mr Arthur Sidgwick's 'Vergil, Aeneid, Book XII.' is worthy of his reputation, and is distinguished by the same acuteness and accuracy of knowledge, appreciation of a boy's difficulties and ingenuity and resource in meeting them, which we have on other occasions had reason to praise in these pages."—*The Academy*.

"As masterly in its clearly divided preface and appendices as in the sound and independent character of its annotations. . . . There is a great deal more in the notes than mere compilation and suggestion. . . . No difficulty is left unnoticed or unhandled."—*Saturday Review*.

"This edition is admirably adapted for the use of junior students, who will find in it the result of much reading in a condensed form, and clearly expressed."—*Cambridge Independent Press*.

QUINTUS CURTIUS. A Portion of the History.

(ALEXANDER IN INDIA.) By W. E. HEITLAND, M.A., Fellow and Lecturer of St John's College, Cambridge, and T. E. RAVEN, B.A., Assistant Master in Sherborne School. Price 3s. 6d.

"Equally commendable as a genuine addition to the existing stock of school-books is *Alexander in India*, a compilation from the eighth and ninth books of Q. Curtius, edited for the Pitt Press by Messrs Heitland and Raven. . . . The work of Curtius has merits of its own, which, in former generations, made it a favourite with English scholars, and which still make it a popular text-book in Continental schools. . . . The reputation of Mr Heitland is a sufficient guarantee for the scholarship of the notes, which are ample without being excessive, and the book is well furnished with all that is needful in the nature of maps, indexes, and appendices."—*Academy*.

BEDA'S ECCLESIASTICAL HISTORY, BOOKS

III., IV., the Text from the very ancient MS. in the Cambridge University Library, collated with six other MSS. Edited, with a life from the German of EBERT, and with Notes, &c. by J. E. B. MAYOR, M.A., Professor of Latin, and J. R. LUMBY, D.D., Norrisian Professor of Divinity. Revised edition. Price 7s. 6d.

"To young students of English History the illustrative notes will be of great service, while the study of the texts will be a good introduction to Mediæval Latin."—*The Nonconformist*.

"In Bede's works Englishmen can go back to *origines* of their history, unequalled for form and matter by any modern European nation. Prof. Mayor has done good service in rendering a part of Bede's greatest work accessible to those who can read Latin with ease. He has adorned this edition of the third and fourth books of the "Ecclesiastical History" with that amazing erudition for which he is unrivalled among Englishmen and rarely equalled by Germans. And however interesting and valuable the text may be, we can certainly apply to his notes the expression, *La sauce vaut mieux que le poisson*. They are literally crammed with interesting information about early English life. For though ecclesiastical in name, Bede's history treats of all parts of the national life, since the Church had points of contact with all."—*Examiner*.

Gallic., Officier d'Académie, Assistant Master of Harrow School, and G. W. PROTHERO, M.A., Fellow and Tutor of King's College, Cambridge. *2s. 6d.*

"Messrs Masson and Prothero have, to judge from the first part of their work, performed with much discretion and care the task of editing Voltaire's *Siècle de Louis XIV* for the 'Pitt Press Series.' Besides the usual kind of notes, the editors have in this case, influenced by Voltaire's 'summary way of treating much of the history,' given a good deal of historical information, in which they have, we think, done well. At the beginning of the book will be found excellent and succinct accounts of the constitution of the French army and Parliament at the period treated of."—*Saturday Review*.

Mr Colbeck seems better to understand the wants and difficulties of an English boy. The etymological notes especially are admirable. . . . The historical notes and introduction are a piece of thorough honest work."—*Journal of Education*.

BACON'S HISTORY OF THE REIGN OF KING HENRY VII. With Notes by the Rev. J. RAWSON LUMBY, D.D., Norrisian Professor of Divinity; late Fellow of St Catharine's College. *Price 3s.*

SIR THOMAS MORE'S UTOPIA. With Notes by the Rev. J. RAWSON LUMBY, D.D., Norrisian Professor of Divinity; late Fellow of St Catharine's College, Cambridge. *Price 3s. 6d.*

"To enthusiasts in history matters, who are not content with mere facts, but like to pursue their investigations behind the scenes, as it were, Professor Rawson Lumby has in the work now before us produced a most acceptable contribution to the now constantly increasing store of illustrative reading."—*The Cambridge Review*.

"To Dr Lumby we must give praise unqualified and unstinted. He has done his work admirably. . . . Every student of history, every politician, every social reformer, every one interested in literary curiosities, every lover of English should buy and carefully read Dr Lumby's edition of the 'Utopia.' We are afraid to say more lest we should be thought extravagant, and our recommendation accordingly lose part of its force."—*The Teacher*.

"It was originally written in Latin and does not find a place on ordinary bookshelves. A very great boon has therefore been conferred on the general English reader by the managers of the *Pitt Press Series*, in the issue of a convenient little volume of *More's Utopia* not in the original Latin, but in the quaint *English Translation thereof made by Kaphe Robynson*, which adds a linguistic interest to the intrinsic merit of the work. . . . All this has been edited in a most complete and scholarly fashion by Dr J. R. Lumby, the Norrisian Professor of Divinity, whose name alone is a sufficient warrant for its accuracy. It is a real addition to the modern stock of classical English literature."—*Guardian*.

SIR THOMAS MORE'S LIFE OF RICHARD III.
With Notes, &c., by Professor LUMBY. [*Nearly ready.*]

A SKETCH OF ANCIENT PHILOSOPHY FROM THALES TO CICERO, by JOSEPH B. MAYOR, M.A., Professor of Moral Philosophy at King's College, London. *Price 3s. 6d.*

"It may safely be affirmed that Mr Mayor has successfully accomplished all that he here sets out. His arrangement is admirably methodical, his style is simple but nervous, his knowledge of his subject full and accurate, and his analytical expositions lucid and vivid. . . . It is therefore a manual which will prove of great utility to University undergraduates, for whom it was particularly prepared, and also for all who study Plato, Aristotle, or other philosophers, in the original. Educated readers, generally, will find it an admirable introduction, or epitome, of ancient speculative thought, and 'a key to our present ways of thinking and judging in regard to matters of the highest importance.'"—*The British Mail*.

"In writing this scholarly and attractive sketch, Professor Mayor has had chiefly in view 'undergraduates at the University or others who are commencing the study of the philosophical works of Cicero or Plato or Aristotle in the original language,' but also hopes that it 'may be found interesting and useful by educated readers generally, not merely as an introduction to the formal history of philosophy, but as supplying a key to our present ways of thinking and judging in regard to matters of the highest importance.'"—*Mind*.

"Professor Mayor contributes to the Pitt Press Series *A Sketch of Ancient Philosophy* in which he has endeavoured to give a general view of the philosophical systems illustrated by the genius of the masters of metaphysical and ethical science from Thales to Cicero. In the course of his sketch he takes occasion to give concise analyses of Plato's Republic, and of the Ethics and Politics of Aristotle; and these abstracts will be to some readers not the least useful portions of the book. It may be objected against his design in general that ancient philosophy is too vast and too deep a subject to be dismissed in a 'sketch'—that it should be left to those who will make it a serious study. But that objection takes no account of the large class of persons who desire to know, in relation to present discussions and speculations, what famous men in the whole world thought and wrote on these topics. They have not the scholarship which would be necessary for original examination of authorities; but they have an intelligent interest in the relations between ancient and modern philosophy, and need just such information as Professor Mayor's sketch will give them."—*The Guardian*.
